

Assignment 2 guide lines

Created by: Ritvik Raj

Roll No: 14CS10040

1. Course Management Software

The main file for running this project is `MainGUI.java`. This project is created via **NetBeans 8.0.2**. You can find the source files inside the `src` folder.

You can add courses within next 5 years. The program allocates a session to each course according to their start dates. You can select a session to view the corresponding courses.

NOTE : *File Handling*

The data added/deleted/modified is **NOT** automatically saved in a file. You can choose to read from a file. This will **append** the read data from the selected input file inside the project folder. Also, you can read at any point of time.

Also, for saving data, you can provide the new *text* file name.

I *personally* find this to be more flexible for the user as he can save changes he wants to and create/read multiple databases (*.ser* files). Also, this gives the user the ability to work with multiple databases at the same time.

2. Contact Management System

The main file for running this project is `MUI.java`. This project is created via **NetBeans 8.0.2**. You can find the source files inside the `src` folder.

The *file handling* note is same as that of course management.

NOTE: *For JApplet*

To run the applet interface, right click on `CLJApplet.java` and click run file. The Applet

Viewer will open the program as JApplet.

3. Digital Photo Album

The main file for running this project is `MainGUI.java` . This project is created via **NetBeans 8.0.2** . You can find the source files inside the `src` folder.

Features implemented:

1. Load
2. Delete
3. Slideshow

Rest everything is self explanatory.
